

iQueue Print Queues

Provides control of print production for one or more digital printing devices. Once a job is sent (released) to an output device, it is automatically placed in the associated Print Queue. Users can stop, hold and delete projects on-the-fly. Use the handy drag & drop feature to switch jobs from one print queue to another.

Full Imposition and Tiling

Create, edit and store custom imposition templates to use over and over. Users can input the desired media sizes, margins, number of columns and rows, add bleeds and printer's marks. The handy nudge, re-sizing and rotation tools allow you to make quick adjustments to keep production moving (iQueue Ultimate).

iQueue Tiling allows you to setup and print oversized, full color signage. You can select the individual sheet size, number of tiles, tile overlap, add connecting edge bleeds, flip alternating tiles, move an image within a tile frame and more (iQueue Ultimate).

Count Sheets / Postal Bundle Marks*

iQueue's Count Sheet feature allows users to insert a separator sheet at specified print quantities, with or without printed count numbers. iQueue can also recognize and parse Postal Bundle Marks that are present in digital files. This prompts the digital printer to print a separator sheet at the designated breaks.

iQueue Job Archiving

Now organizing and storing customer files is a snap. Simply create a folder, then drag & drop all related files. iQueue also retains important job settings so re-prints are quick and easy.

Smart Job Cost Estimating

iQueue takes the guess work out of job cost estimating. Simply enter the desired quantity and click on the Job Cost tab to see your total consumable costs instantly (iQueue Ultimate).

3-Edge Printing

If your printer supports 3-Edge Printing, iQueue allows you to print an image right up to the edge on 3 sides (not gripper edge).

Consumables Usage

iQueue makes it easy to monitor toner levels, drum life, belt life, and the fuser life for most* print devices on your network.

Now JDF Compliant

iQueue XI allows JDF Job Ticket messaging and Device Control language.
